Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Election/Restrictions***

1. Claims 3-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on December 17, 2004.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2, 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmittmann.

The patent to Schmittmann shows a method of destroying ants by providing a quantity of dry ice or carbon dioxide snow and placing the quantity onto the ant mound noting column 5, lines 41-51. Schmittmann permits the quantity of ice to lower the temperature of the ant mound upper surface to create sustained low temperature on the ant mound upper surface and thereby disrupt the activities of the ants in the ant mound. Broadly speaking the carbon dioxide snow or dry ice can be considered ice which does not melt but sublimates into a gas directly so Schmittmann does not have cold water dripping from the ice to lower the temperature of the ant mound. In reference to claims 1-2, it would have been obvious for Schmittmann to employ ice or snow since the selection of

a known material is based on its suitability for the intended use and the function is the same. See *In re Leshin*, 125 USPQ 416. In reference to claim 23, Schmittmann embeds a quantity of carbon dioxide into the dry ice which can be considered as a controlled substance.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Eliasson, Cassidy, Gustafson, and Narita show the state of the art.
